

Connor Parsons

.NET / POWER PLATFORM DEVELOPER

Dynamics 365, Dataverse, C# Plugins, Azure, TypeScript

connorparsons02@gmail.com | +64 20 4140 7002 | Christchurch, NZ / Remote / Auckland as needed | <https://github.com/Cordedmink2>

PROFILE

.NET / Power Platform developer with 2 years' experience building Dynamics 365 and Dataverse solutions for New Zealand clients. Strong in C# plugins, TypeScript web resources, Power Automate, Dataflows, KingswaySoft integrations, and Azure Function Apps, with an interest in maintainable, strongly typed Dataverse development and automated delivery practices. Experienced in migration and modernisation work, replacing legacy on-premises dependencies, and working directly with client stakeholders from requirements through delivery. Microsoft PL-200 and PL-900 certified.

SKILLS

Power Platform / Dynamics 365

Dataverse, model-driven apps, Dynamics 365 customisation, Power Automate, Dataflows, Power Apps, SharePoint integration, Business Process Flows, DocumentCorePack

.NET / Custom Development

C#, Dataverse plugins, Azure Functions, TypeScript, JavaScript web resources, Webpack, Vite

Integration / Migration

KingswaySoft, data migration, on-premises to online migration, legacy SQL dependency replacement with Dataflows, storage queues, managed identity, authentication

Delivery / ALM

Azure DevOps boards, Git, CI/CD, managed solution delivery across environments, requirements gathering, demos, UAT/support, maintainable project structure

Best-practice focus

Typed Dataverse development, plugin testability, maintainable solution structure

EXPERIENCE

Developer · Adaptable Consulting

2024 – Present · Auckland, NZ

.NET / Dataverse Plugin Development

- Designed, maintained, and built C# Dataverse plugin projects, including new projects started from scratch for client engagements.
- Implemented custom Dynamics 365 / Dataverse business logic across multiple model-driven app solutions.
- Supported managed solution delivery across development, test, and production-style environments using Git-controlled solution structure and CI/CD practices.

Dynamics 365 On-Premises to Online Migration

- Modernised legacy Dynamics functionality during an on-premises to online migration for a major New Zealand tertiary education client.
- Reworked deprecated JavaScript web resources for the online environment, replacing unsupported on-premises patterns with maintainable TypeScript-based web resources.
- Replaced legacy SQL stored procedure dependencies with Dataflows.

TypeScript / Web Resource Modernisation

- Pioneered adoption of TypeScript + Webpack for Dynamics web resources, replacing legacy JavaScript patterns with a modern build pipeline.
- Established a monorepo architecture for new client work, with solution-based structure for managed environments and CI/CD pipelines.
- Standardised Webpack/Vite-based web resource development for maintainability and repeatable delivery across new client engagements.

Power Automate / SharePoint / Document Automation

- Automated cross-site SharePoint document movement based on field values and Business Process Flow stages.
- Built complaints/intake automation for a New Zealand professional regulatory body, including approval flows, Teams cards, emails, and document generation.
- Developed complex DocumentCorePack Word templates and OneClickActions for document-heavy business processes.

Azure / Integration Work

- Built Azure Function Apps handling authentication, storage queues, and managed identity.
- Delivered integration and migration work using KingswaySoft, Dataflows, Dataverse, and SharePoint.

Client-Facing Delivery

- Worked directly with clients using Azure DevOps boards across features, stories, and bugs.
- Supported client-facing demos, requirements gathering, stakeholder updates, UAT, and post-delivery support.

PROJECTS

Dynamics 365 On-Premises to Online Migration

Modernised legacy Dynamics functionality from an on-premises environment to Dynamics 365 online for a major New Zealand tertiary education client. Reworked deprecated JavaScript web resources, replaced legacy SQL dependency patterns with Dataflows, and supported stakeholder-facing delivery, UAT, and post-migration support.

Dynamics 365, Dataverse, TypeScript, JavaScript web resources, Dataflows, legacy SQL dependency replacement

Complaints / Intake Automation

Built a complaints and intake process for a New Zealand professional regulatory body where document-heavy intake work needed more repeatable handling. Implemented form handling, approval flows, Teams cards, notification emails, document generation, and stakeholder-facing support to improve process consistency.

Power Automate, Dynamics 365 / Dataverse, SharePoint, Teams, DocumentCorePack

Monorepo / TypeScript / CI/CD Tooling Architecture

Established a repeatable monorepo and build-pipeline approach for Dynamics 365 web resources and managed solution delivery across environments. Standardised TypeScript + Webpack/Vite development and solution-based project structure for maintainable new client engagements.

TypeScript, Webpack, Vite, Git, CI/CD, Dynamics 365 web resources

EDUCATION

University of Canterbury

Bachelor of Science, Computer Science major

Relevant study: software engineering, databases, algorithms, Python data analysis, C/C++ systems programming.

St Peter's College, Auckland

Cambridge A Levels

CERTIFICATIONS

PL-200

Microsoft Certified: Power Platform Functional Consultant Associate

PL-900

Microsoft Certified: Power Platform Fundamentals
